

uvex

uvex 2 customised fit for increased comfort

uvex 2 made with
female specific
footwear last

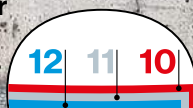

Simply reducing the male product size for females is not sufficient for a quality fit. The uvex 2 in **sizes 3 to 6.5** have been made using a **last specifically designed for the contours of the female foot**.

We also offer a range of **width fittings** to increase wearer comfort, 11, 12 and 14.

Customised fit
width and arch
support insoles

uvex multiple fit system insole changes the dimensions inside the footwear based on the wearers requirements. **Width fitting 10** is a thicker insole for a narrower fit. **Width 12** is a thinner insole increasing space inside the shoe for a wider fit.

uvex tune-up insoles are designed to increase wearer comfort by providing optimum support for **low, medium or high arches** of the feet.

uvex footwear
fit clinic
for optimum fit

The uvex fit clinic service ensures you **find the correct size footwear** which in turn helps reduce discomfort and potential foot problems, while also promoting better support for the musculoskeletal system.

The tune-up board takes a heat impression of the foot, which **determines size, width, gait and exact pressure points** of your feet.
